

Energy Management Policy

LX Semicon, a company that designs, develops and manufactures semiconductor components, recognizes energy management as a key element of corporate management and systematically builds, implements, maintains and continuously improves our energy management system to meet international standard requirements.

For the purpose, the following energy management policy is declared so that all employees can clearly understand required compliances through operation of the energy management system.

[Energy Management Policy]

1. Proactively respond to regulation in compliance with energy laws and other requirements.
2. Voluntarily involve with climate change through reduction of emissions of greenhouse gas and usages of energy.
3. Take corporate social responsibility by improving usages of energy throughout business life cycles.

All employees will do their best to participate in the energy education and inspection through periodical interaction with others to achieve the target.

Leaders will take the lead in ensuring that all employees are committed to fulfilling social responsibilities and preserving environment through eco-friendly energy management, and will ensure transparency in energy management.
